We were unable to attend the public hearing held earlier this week, however, this was not through lack of interest. As residents of Las Vegas we feel it is outrageous that the federal government would insist on making this state the dumping grounds for materials that will negatively affect the environment. We, too, have studied and read reports and cannot understand how this site selection was made when the area in which it is located is unstable geologically and since there is no certainty as to how these waste products will react underground there is every reason to believe the contamination emanating from this area will have a deleterious effect on the population in the future.

We think it unfair that those areas which derive benefits from the manufacturing of the products that produce this waste are not responsible for the storage of this matter.

We want Secretary Abraham to attend a meeting in this city in a location that is easily accessible to the residents so he can see how strongly we feel about unfavorable federal decisions concerning the future of this area.
